If a Person has been Scuba Diving and has Symptoms such as:

- Pain (often around joints)
- Numbness & Tingling
- Weakness/Paralysis
- Altered Responsiveness
- Breathing Difficulty
- Vision or Speech Difficulty
- Other Neurological Symptoms

It is Essential to:

- Lay the Diver Down Flat
- Provide Basic Life Support as Necessary
- Provide as near to 100% Oxygen as Possible
- Call a DAN-Supported Hotline
- Rehydrate with Fluids if able
- Perform a Physical & Neurological Examination (if trained)
- Record Details of Dive(s), Signs & Symptoms, First Aid and Treatment Given

Learn the Skills so You can Help in a Diving Emergency.
